

# We're creating a path to a greener future with AirTight SprayFoam Insulation

AirTight SprayFoam . . . A *greener* alternative to traditional insulation materials because:

## *AirTight SprayFoam:*

- \* Reduces energy consumption up to 60% more
- \* Creates healthier indoor air quality
- \* Utilizes ozone friendly materials
- \* Helps sustain our natural resources

*Sustaining our planet*

Fossil fuel power plant

Fossil fuels - coal, oil and natural gas - currently provide more than 85% of all of the energy consumed in the United States, the majority of which is used for electricity and heating oil for our homes

By utilizing the superior thermal and air sealing characteristics of AirTight SprayFoam, homeowners/building owners can realize energy savings of up to 60% greater than comparable buildings with traditional insulation. Less energy requirements for conditioning our buildings means less consumption of our natural resources (fossil fuels). Sustaining our planet is truly what “going green” should mean to all of us.
